

Our Yard

SUN SHIPBUILDING & DRY DOCK CO., CHESTER, PA., NOV. 1962

Memo from John G. Parn, Jr.

Truth Is Where You Find It!

Did you read the bulletin board notice of President Paul K. Atkinson of Oct. 23, 1982? Did you repeat it to your family?

The last paragraph was the important one to remember. It read:

"THREE MAPS WERE OBTAINED IN A HIGHLY COMPETITIVE MARKET AS AN EXTREMELY LOW PRICE. THE BEST EFFORTS OF ALL CONCERNED WILL BE REQUIRED TO MAKE THIS CONTRACT A SUCCESSFUL VENTURE."

The last effort includes not only a good faith work, but as well, regular reporting, working safely and not wasting material.

Below is a reprint of an article from the April 1982 *CRUISE TARIFFS* which spells out the importance of regular attendance.

MEN not AT WORK Is Expensive, Too

Attendance is not necessary for the subject to get paid or take time. In fact, some men in power do not attend. Attendance is not necessary for the subject to get paid or take time. In fact, some men in power do not attend. Attendance is not necessary for the subject to get paid or take time. In fact, some men in power do not attend.

Attendance is not necessary for the subject to get paid or take time. In fact, some men in power do not attend. Attendance is not necessary for the subject to get paid or take time. In fact, some men in power do not attend.

Large Economy Size Tower Goes To Tidewater Oil

Orders of the kind received by these years are scarce. "Orders for towers of this size are scarce," says J. H. Williams, manager of sales for the American Petroleum Institute, "but the fact that in the Tidewater oil plant in California they had a tower of this type indicates the fact that in the oil years with the expansion in new refineries, there is a lot of order in the air."

The tower that has in the distance just shown at the Tidewater plant which brought the contract for this tower was designed by the American Petroleum Institute, and the tower was designed by the American Petroleum Institute, and the tower was designed by the American Petroleum Institute.

The tower was designed by the American Petroleum Institute, and the tower was designed by the American Petroleum Institute, and the tower was designed by the American Petroleum Institute.

The tower was designed by the American Petroleum Institute, and the tower was designed by the American Petroleum Institute, and the tower was designed by the American Petroleum Institute.

The tower was designed by the American Petroleum Institute, and the tower was designed by the American Petroleum Institute, and the tower was designed by the American Petroleum Institute.

The tower was designed by the American Petroleum Institute, and the tower was designed by the American Petroleum Institute, and the tower was designed by the American Petroleum Institute.

ORDERED through American Petroleum Institute to be set in place with suitable and Pennsylvania Railroad officials in charge of getting the tower into place near the site of the new plant. The tower is the largest distillation tower ever built in the United States, and it is the largest distillation tower ever built in the United States, and it is the largest distillation tower ever built in the United States.

Delivery Problem We Take In Stride

100-FOOT DIAMETRE (RIMMED) PIPE WHY ANOTHER RECORD. Four cars go around on tracks in artificial fashion while seven cars, eight miles, used in being moved back along face of rest of pipe yard preparatory to being moved out onto Pennsylvania Railroad tracks.

And as our latest work that we have done in this area continues.

W. W. WOOD,
General Manager

"We in Pennsylvania are glad to see that you worked out the equipment for the order that should be valued at \$1,000,000. It is a big order. We have always been very helpful in every other respect. We are glad to see that you have been able to get the order in the hands of the Pennsylvania Railroad."

"We are glad that Pennsylvania will be helped in the way of steel by receiving this equipment and delivery of the steel for the order."

"We are glad to see that you have done it in the industrial field."

W. W. WOOD,
General Manager

A major project that is now under way at the Pennsylvania Railroad is the construction of a new steel mill. The mill is being built in a new location, and it is expected to be completed in the next few years. The mill will be a major addition to the Pennsylvania Railroad's steel-making capacity, and it is expected to be one of the most modern and efficient steel mills in the world.

Blood Bank Enriched But %age of Donors Still Low

"This is the first time in the history of the blood bank that the percentage of donors has been so high," said a representative of the American Red Cross, who is in charge of the blood bank. The percentage of donors has been so high because of the fact that the blood bank has been able to attract a large number of new donors. This is due to the fact that the blood bank has been able to provide a large number of services to the community, and this has helped to attract a large number of new donors.

The American Red Cross is a national organization that is dedicated to providing humanitarian aid. It is one of the largest and most successful organizations in the world, and it has a long history of service to the community. The American Red Cross is currently facing a number of challenges, and it is working to address these challenges in a number of ways.

One of the major challenges that the American Red Cross is facing is the need for more blood donors. The blood bank is currently facing a shortage of blood, and this is due to the fact that the percentage of donors is still low. The American Red Cross is working to address this shortage by providing a large number of services to the community, and it is also working to attract a large number of new donors.

The American Red Cross is also working to address the need for more blood donors by providing a large number of services to the community. This includes providing a large number of services to the community, and it is also working to attract a large number of new donors. The American Red Cross is committed to providing humanitarian aid, and it is working to address the need for more blood donors in a number of ways.

Profiles of U. S. Lines ships to be built here.

West Coast's 6% Killed, But Too Late To Save Contract

Last month the Maritime Administration voted against the bids for the construction of 100 West Coast Pan American Lines ships. The bids had been set last October following a contract for 100 vessels valued at \$1,000,000,000.

- | | |
|----------------------|-----------------|
| 1. NATIONAL STEEL | \$1,000,000,000 |
| 2. THE CRANE CO. | \$1,000,000,000 |
| 3. POLYNESE SHIPYARD | \$1,000,000,000 |
| 4. HULLS, AMERICA | \$1,000,000,000 |
| 5. HULLS, CANADA | \$1,000,000,000 |
| 6. HULLS, U. S. | \$1,000,000,000 |
| 7. HULLS, U. S. | \$1,000,000,000 |
| 8. HULLS, U. S. | \$1,000,000,000 |
| 9. HULLS, U. S. | \$1,000,000,000 |
| 10. HULLS, U. S. | \$1,000,000,000 |

The Maritime Administration's decision was based on the fact that the bids were too late to save the contract. The contract was set last October following a contract for 100 vessels valued at \$1,000,000,000.

Young men and women at the school in 1948. They started to get out of school but their St. James High School seniors didn't miss one school and still came. So they must have been impressed in getting what goes on behind the scenes. They were able to stay after school was dismissed and get full treatment which they seemed to enjoy. But that is behind them.

INK SPOTS

FROM THE
FIRST EDITION, 1948

By Ed Hensley

We have several new faces in the 50th anniversary class including Ed Hensley, 2000 Pine Street, Newark, N.J., and Jay Stone on their respective sides.

Ed Hensley, 2000 Pine Street, Newark, N.J., was in school when the first issue of the Ink Spots was published. He was one of the first to subscribe to the paper.

Boiler Shop Out In Front In B League

A League Is A Tight Company

The New England area league had its first meeting about the middle of August, 1947, with the teams representing American, Chicago, Montreal, New York and Boston. The league has since grown to include the following teams: Boston, Montreal, New York, Philadelphia, Pittsburgh, St. Louis, St. Paul, Toronto and Washington.

As a league there are no one-day events, all fixtures must be worked out by trade, and each team must have the same amount of time available in a week as the other teams. The league has a long history, and it is expected that it will continue to grow and prosper in the years to come.

At the present time the league is working out its fixtures for the season.

The league has a long history, and it is expected that it will continue to grow and prosper in the years to come.

The league has a long history, and it is expected that it will continue to grow and prosper in the years to come.

How important is *one* vote?

Whether you read
this NEWSWEEK message
before or after Election
Day, it is valuable!

We're getting along in years
as a nation.

Isn't it time this question
was answered? Remember
Rutherford B. Hayes?

One electoral vote put him
in the White House.

One congressional
vote saved Redemptive Service just
12 weeks before Pearl Harbor.

One vote can take a frightened
child off a busy highway
and onto a new school bus.
A wise man once observed,

"Liberty means responsibility.
This is why most men dread it."

But if you dread it and ignore
it, how long can it last?

Freedom, like a receding hairline,
can't last all at once.

It goes gradually.

If you can spend a few
minutes each day using
hair tonic to save your hair,
can't you spend a few minutes
each year at the polls
to save your unity?

SKILLS FOR THE SPACE AGE

The combination of our facilities for fabricating heavy-wall vessels or components and weldments with our welding and machine shops especially equip us for nuclear work.

Our situation on the waterfront with piers and heavy lift cranes suggests these facilities for shipments too large to move from our plant by rail.

We welcome inquiries regarding your requirements in this field.
